

Cedar County

Impact At-A-Glance

Brought to you by Nebraska Extension

Cedar.unl.edu

Math skills are a critical component of development for young children. Working with Nebraska Extension, families discovered how they can incorporate math-related concepts into everyday activities.

Math at Home is a text-based program that helps families build upon their child's natural curiosity by incorporating math-related skills into their daily routines. Miranda, like many parents of young children, often avoid teaching their children math concepts because they feel intimidated. By partnering with Extension, Miranda was able to gain confidence and develop a math mindset renewing her excitement for teaching her 5-year-old daughter. "I loved the simplicity of ways to incorporate math while reading books and playing games. My daughter's math skills improved throughout this program."

Programs At-A-Glance

- 2022 Forage Field Day educated producers on cover crop use and improving silage quality. Average value to operations was estimated at \$1.50 per head or \$3.75 per acre.
- Through collaborative efforts Cedar County Communities for Kids was one of twelve communities awarded \$78,500 to increase the capacity and quality of early care and education.

100%

of participants in producer led Pasture-Walks planned to implement changes to their grazing.

75%

of second graders in Cedar County participated in STEM programming, reaching 111 youth.

11%

increase in registered Cedar County 4-H memberships.
