

# Box Butte County 2024 Impact At-A-Glance

Through his participation in First Lego League, William has gained confidence in teaching others how to code and has become a leader on his team.

First Lego League robotics began in Box Butte two years ago. Since then, the program has grown to include four teams with around twenty youth. One member who has been with the program since the beginning is William Harris. William was drawn to First Lego League because he enjoys building with Legos and programming. Since joining robotics, he has improved his coding skills and can now complete coding tasks faster than his classmates. Through this program, he has also gained confidence in presenting his ideas to judges. Recently, he received a Spike Prime robot, which he codes independently.

*STEM Day was hosted for Saint Agnes 5th–8th grade students. Eighty-eight percent said they learned new things about engineering. One student remarked, "I learned that you have to try and try again in order to get something right."*

## 1,301

youth were reached in Box Butte County with 4-H programming

## 100%

of Babysitting Clinic youth participants said they learned how to reduce the risk of choking when caring for younger children
