

2017 NEBRASKA STATE FAIR PORK CARCASS RESULTS

Attached are the pork carcass results from the 2017 Nebraska State Fair. Two-hundred and six market swine were entered in the contest. Carcasses are grouped in ribbon groups by weight, ranked on percent lean, which is composed of tenth rib fat thickness and loin muscle area measured by ultrasound and hot carcass weight measured after slaughter. Percent Lean was calculated using the prediction equation from NPPC "Pork Composition and Quality Assessment Procedures," 2000. This equation estimates the pounds of standardized fat free lean. The averages for the carcasses in 2017 as compared to 2016 were:

	2017	2016	
Live Weight:	269.9	274.3	
Hot carcass wt:	207.7	208.0	lbs
Carcass 10th rib fat:	0.82	0.83	inches
Loin eye Area:	8.93	8.88	sq. inches
Percent lean:	56.116	54.614	percent

Ribbon awards are based on the following:

- Purple: 56.00 % Lean or more, ≥ 0.5 inches 10th rib backfat, <10.0 sq. inches loin eye area, and 181 to 215 Hot Carcass Weight.
- Blue: 54.00 - 55.99% Lean, ≥ 0.4 inches 10th rib backfat, <11.0 sq. inches loin eye area, and 167 to 229 Hot Carcass Weight.
- Red: 52.00 - 53.99% Lean, 160 to 236 Hot Carcass Weight
- White: 51.99% Lean or less, and carcasses failing to meet carcass requirements

Payment of the hogs was based on the lean pork value buying program by Hormel Foods. You can view a presentation of how the buying program works at:

<http://4h.unl.edu/state-fair/exhibitor>

Click on: 2017 Presentation: Pork Carcass Evaluation and Value. Dr. Dennis Burson

A special thanks is extended to the Hormel Foods of Fremont, Nebraska for slaughtering the pigs.

Dennis Burson
Extension Meat Specialist
