BUILD & DESIGN A STRING MAZE

Grow your engineering skills by building & designing a STRING MAZE!

Get started by finding string, yarn, or twine to use, and pick a spot or room to build your maze.

Tie or tape the end of the string to either a high point or a low point, then connect the string to another item in the room. Continue the process by crisscrossing strings, and creating areas to crawl under, bend over, or navigate in innovative ways. Keep adding string connections until you've created a cool-looking maze!

Watch your family and friends giggle for hours!
