

SPLASH INTO EXTENSION

Irrigating Without NRD Permission

Ag producers need to make sure that all new irrigation wells are registered with the NRD. Aerial photography can effectively help monitor and enforcing these rules.

--- Dave Aiken, Nebraska Extension Water and Ag Law Specialist.

Chemigation Certification Schedule

If you plan to monitor and manage the application of chemicals through your irrigation system during 2015, you will need to attend a training session and pass a written test to become certified or recertified if your certificate expired on December 31, 2014. Requirements for initial and recertification are the same and there is no charge for the training or manuals.

Please pre-register at the Extension Office whose training session you plan to attend.

If you pre-register, you will receive a training manual and calibration workbook to review prior to the training session. On the day of the training session, please bring the chemigation manual and calibration workbook, a No. 2 pencil, and a calculator along to use during the training. If you do not pre-register, a new copy of the training manual will be provided the day of the training program. Prior review of the material in your training manual and calibration workbook will be helpful when taking the exam.

For a list of training dates in Nebraska, contact your local Extension Office or go to <http://deq.ne.gov/NDEQProg.nsf/OnWeb/Chemig>.
