

SECOND GRADE

Program	Price/Classroom	Length	Facilitator
Farm in a Glove	\$5.00	2 45min sessions	Extension
Animals Inside & Out	\$10.00	3-6 45min sessions	Extension
Dissection: Owl Pellets	\$15.00	1 45min session	Extension
First Time Physics	\$5.00	2 45min sessions	Extension
Handwashing	FREE	1 45min session	Extension
Kitchen Science	\$15.00	1 90min session	Extension
Embryology	\$5.00	2 45min sessions	Extension
*Mobile Science Lab	TBD	varied	Extension
4-H STEM Challenge	FREE	varied	Either
*STEM Days	TBD	Field Day	Extension
TEC Box	\$10.00	4 45min sessions	Either

PROGRAMS:

Farm in a Glove

Students will learn about agriculture in Nebraska, parts of a plant and grow common crops in a glove.

Animals Inside & Out

Students will gain knowledge and understanding of the livestock, equine, and companion animals through topics of management, body systems, and careers to understand how animals work inside and out. Students will be able experience hands on learning opportunities to think like a veterinarian as they learn about the various topics to make connections of their knowledge of the animal industry to their lives.

Owl Pellet Dissection

Explore the world of animal predator/prey relationships by dissecting owl vomit (owl pellets). Students will learn about the life cycle of animals in the food chain as well as how food gets broken down during digestion in owls and in humans.

First Time Physics

This program focuses on Newton’s Laws of Motion; covering light and sound through interactive learning activities.

Handwashing

Extension staff will use a blue light and a special lotion to show students all the germs that are on their hands. Students will then learn the proper way to wash their hands and check to make sure they clean all the germs.

Kitchen Science

Students get comfortable in the kitchen while exploring the world of chemistry using simple ingredients, food, utensils and containers. Advanced level (4-8 grades): Participants will learn to predict outcomes and experiment with ordinary kitchen items.

**NEBRASKA EXTENSION
WASHINGTON COUNTY
SCHOOL ENRICHMENT PROPOSALS**

**2023-2024
Programming Year**

Embryology

This lesson teaches youth how life develops by observing the process of hatching baby chicks over a three-week period. During the lesson, students learn about the makeup of eggs, the difference between store eggs and fertilized eggs and the process of hatching chicks. Students assume responsibility of the eggs as if they were the mother hen and rotate the eggs in the incubator daily.

Mobile Science Lab*

The Mobile Science Lab brings science to youth through interactive activities that show youth that science is all around them.

4-H STEM Challenge

Each year 4-H STEM Challenge helps students to learn fundamental STEM skills while they wrestle with the same questions as today's top scientists and engineers. Educators will provide a kit that walks through activities related to physics, light, engineering, coding and more.

STEM Days*

Students learn about engineering processes through a variety of hands-on activities.

TEC Box

Tinker. Explore. Create. Box was developed to introduce youth to the idea of entrepreneurship, encourage active listening that leads to empathy, creative problem solving and focus on non-technical aspects of entrepreneurship.

*Represents multi-grade or school-wide events that last ½ or full days. Most charged per student.
