Awards:
Randy and Jill Belt Family, Wayne – Champion Junior Division Ag Miscellaneous
Randy and Jill Belt Family, Wayne – Champion Senior Division Ag Miscellaneous
Craig and Cindy Evans, Winside – Champion Senior Division Engineering
Craig and Cindy Evans, Winside – Champion Junior Division Engineering

Premiums: Purple $2.25, Blue $2.00, Red $1.75, White $1.50 Participation $1.50

General Information:
A. The name and county of each exhibitor should appear separately on the back of each board, poster or article and on the front cover of the notebooks so owner of exhibit may be identified if the entry tag is separated from the exhibit.
B. Each individual is limited to one exhibit per class.
C. Several classes require a display board which should be a height of 24 inches and not to exceed 1/4 inch in thickness. A height of 23 7/8 inches is acceptable to allow for the saw kerf if two 24 inch boards are cut from one end of a 4 x 8 foot sheet of plywood. Nothing should be mounted within 3/4 inch of the top or bottom of the board. (Example: Woodworking & Electricity.)
D. Fabricated board such as plywood, composition board, or particle-type lumber may be used for demonstration displays.
E. Demonstration boards should be sanded and finished to improve their appearance. The finish on a demonstration board will be judged as a woodworking exhibit.
F. Demonstration boards should include an overall title for the display, plus other necessary labeling.
G. Reports should be written using the scientific method whenever possible (Background, the Question or hypothesis, what you plan to do and what you did, Method used and observations, Results: what you learned). All reports should be computer generated and enclosed in a clear, plastic cover. The reports should be attached securely to the display.

4-H WELDING
(All metal welding process accepted)

Premiums: Purple $2.25, Blue $2.00, Red $1.75, White $1.50, Participation $1.50

A. Refer to General Information at the beginning of the 4-H Science, Engineering & Technology section.
B. Youth must be enrolled in the Welding Project to enter the following classes.
C. All welds exhibited in class +H-920-1 and +H-920-2 must be mounted on a 12 inches high x 15 inches long display board of thickness not to exceed 3/8 inch. Attach each weld on a wire loop hinge or equivalent, so the judge can look at the bottom side of the weld when necessary. Each weld should be labeled with information stated 1) type of welding process (stick, MIG, TIG, Oxy-Acetylene, etc.) 2) kind of weld, 3) welder setting, 4) electrode/wire/rod size, and 5) electrode/wire/rod ID numbers. Attach a wire to display board so it can be hung like a picture frame. If no plans are included with welding article or welding furniture, item will be disqualified.

Classes:
+H-920-001 Welding Joints (SF281) – A display of one butt, one lap and one fillet weld.
1. All welds should be made with the same electrode/wire/rod size and number.
2. Welds should be made only on one side of metal so penetration can be judged.
3. Welds should be cleaned with chipping hammer and wire brush. Apply a coat of light oil (penetrating oil) to the metal to prevent rusting. Wipe off excess oil.
4. It is suggested that all welds be on the same size and thickness of metal. These pieces, referred to as coupons, should be 1.5 to 2 inches wide and 3.5 to 4 inches long. A good way to get this size is to buy new cold rolled strap iron and cut to length. The extra width is needed to provide enough metal to absorb the heat from the welding process and prevent the coupons from becoming too hot before the bead is completed. Narrower coupons will become very hot, making an average welder setting too cold at the bead start, just about right in the middle, and too hot at the end. The correct way to weld narrow strips is to make short beads and allow time to cool, however this project requires a full length bead.

Stick welding:
- Suggested coupon thickness-1/4 inch if using 1/8 inch rod
- Suggested rod-AC and DC straight or reverse polarity-
  first E-7014, second E-6013

MIG welding:
- Suggested coupon thickness-1/4 inch if using .035 wire and
  1/8 inch if using .023 wire

Oxy Acetylene:
- Suggested coupon thickness- 1/8 inch
- Suggested rod-1/8 inch mild steel rod
**H-920-002 Position Welds** (SF281)- A display showing three beads welded in the vertical down, horizontal and overhead positions.

1. It is suggested that all welds be on same size and thickness of metal. These pieces are referred to as coupons. The welds can be on one coupon that is about 4 inches x 4 inches or on individual coupons that are about 2 inches x 4 inches and 1/4 inch thick. Suggested rods for this class of position welds for AC and DC straight or reverse polarity is, first E-6013, second E-7014 and E-6010 for DC reverse polarity only.

2. Welds should be cleaned with a chipping hammer and wire brush. Apply a coat of light oil (penetrating oil) to the metal to prevent rusting. Wipe off excess oil.

**H-920-003 Welding Article** (SF281)- Any shop article or piece of furniture where welding is used in the construction. 60% of item must be completed by 4-Her and notes regarding laser welding or machine welding must be included. All plans, plan alterations, and a bill for materials must be attached to the article. Protect plans with a cover. All welds should be cleaned and protected from rust with paint or light oil. Plans are to be complete enough that if they were given to a welding shop, the item could be made without further instructions. Bill of materials should include a cost for all items used including steel, electrodes, paint, wheels, etc.

**H-920-003 Welding Article** (SF282)- Any furniture with 75% welding is used in the construction. 60% of item must be completed by 4-Her and notes regarding laser welding or machine welding must be included. All plans, plan alterations, dimensions, and a bill for materials must be attached to the article. Protect plans with a cover. May be displayed outside. All welds should be cleaned and protected from rust with paint or light oil. Plans are to be complete enough that if they were given to a welding shop, the item could be made without further instructions. Bill of materials should include a cost for all items used including steel, electrodes, paint, wheels, etc.

**H-920-005 Careers Interview** (SF239) – Interview someone who is working in the field of welding and research that career. Interviews can either be written or in a multimedia format (CD/DVD). Written interviews should be in a notebook. Written reports should be 3 to 5 pages, double spaced, 12 point font and 1 inch margins. Multimedia reports should be 3 to 5 minutes in length.
